Tortuguero is the main attraction of this area, inviting tourists to marvel at its biodiversity, excellent sport fishing, fascinating trips through a complex network of interconnected canals and the chance to observe turtle species as they nest. It is located in the northern Caribbean of Costa Rica and is home to the two central towns of Tortuguero and Parismina.

The region is known around the world for its main attractions such as the nesting of green sea turtles on the beaches of Tortuguero National Park and the Barra del Colorado National Wildlife Reserve, which is also an excellent site for sport fishing of snook, tarpon and other species.

The most attractive destination in the northern Caribbean is undoubtedly Tortuguero, with an impressive national park that protects the nesting sites of green sea turtles. Near Tortuguero, the northern Caribbean is also home to some remote villages where sport fishing is practiced, and where large and impressive leatherback turtles can be seen during some months of the year.

Two protected areas are located in this region: the Barra del Colorado Refuge, located in the border area with Nicaragua, and Tortuguero National Park, an area surrounded by coastal forest and swamps. Since it is part of the Caribbean region, the area is very rainy. Although the weather does get drier between December and April, rain still falls during these months.

This mini guide contains an overview of the tours and activities that you can experience in the cantons of Pococi, Guacimo and Siquirres.

Tortuguero National Park

Tortuguero National Park is known as the Little Amazon because it contains the largest area of protected tropical rainforest. It is characterized by a complex system of rivers, canals and lagoons, some of which are used for the transporting people and goods. These waterways are the main attractions for visitors to the region. They make it possible to observe an extraordinary variety of flora and fauna. The location of the Tortuguero canals, due to their proximity to the sea, makes them an important area for turtle nesting. Four types of sea turtles nest here: the green sea turtle (Chelonia mydas) is the most numerous from July to October, the leatherback sea turtle (Dermochelys coriacea) from March to June, the hawksbill turtle (Eretmochelys imbricata) from April to October, and the loggerhead turtle (Caretta caretta) from April to May. Birds are abundant, with approximately 442 known species, including the green macaw (Ara ambigua), the great tinamou (Tinamus major), the peacock, toucans, sparrow hawks, etc.

Tourism is the town’s main livelihood, followed by fishing and agriculture. Activities for tourists take place day and night in this exciting spot: hiking, enjoying the sun and the beach, observing the biodiversity, boat or kayak rides through the Tortuguero canals, or enjoying the typical Caribbean social life, music and dance.

Barra del Colorado National Wildlife Refuge

In the territory of the Barra del Colorado National Wildlife Refuge, visitors can find coastal areas, lagoons, rivers, swamps of herbaceous species, flooded forests and forests of small hills with heights that do not exceed 219 meters above sea level. The high precipitation almost all year round makes Barra del Colorado one of the rainiest places in the country, with an average annual relative humidity of 88%, as is typical of the lowlands of the very humid tropics.

All of these elements make Barra del Colorado National Wildlife Refuge one of the most biologically diverse areas in the Costa Rican Caribbean region. It is home to a great diversity of species, including one third of the country’s endangered animal species. Its ecosystems generate essential services for the well-being of the communities located around the refuge, while its tourist attractions remain largely undiscovered by Costa Ricans and foreigners.

The Barra del Colorado Wildlife Refuge is administered from the nearby Tortuguero National Park.

Tourism

The main communities in the area surrounding Tortuguero National Park include Barra de Parismina, Barra de Tortuguero and San Francisco, which are all accessed primarily by boat or plane. The inhabitants of the area mainly make their living through tourism activities related to the Tortuguero National Park, the Barra de Colorado National Wildlife Refuge, the region’s natural navigable canals and the beaches where sea turtles nest.

The economic activities of rural villages of Barra Parismina, Fortuna and San Francisco, meanwhile, are mostly related to the primary sector. Barra Parismina and San Francisco are communities...
whose development depends on fishing and tourism, with smaller amounts of subsistence agriculture based on plantain or tubers. The economy of the community of Fortuna is based on growing crops such as plantain, palm and tubers.

**Tortuguero town:** Located on the Barra del Tortuguero, it is adjacent to the Tortuguero National Park at the Cuatro Esquinas Operational Center, which is located near the town. It has the most developed tourism services of any town near Tortuguero National Park, as well as having the largest growth in population and infrastructure in the area. It also acts as the logistics center for the commercial and tourism activities in the communities around the Río Tortuguero and its canals.

The charm of the town of Tortuguero is another essential component of your visit. It’s an enclave away from the hustle and bustle of civilization, where you will not find traffic jams, but a paradise infused with reggae and people on bicycles.

One of the most striking things about the town are the murals that adorn its walls, full of color and joy, in perfect harmony with the character of its inhabitants.

**Village of San Francisco:** It is one of the region’s youngest settlements. Because of its proximity to the community of Tortuguero, the town provides most of its supplies as well as employing most of its population, mainly in tourism. San Francisco therefore has a very limited tourism offer, with very little investment planned by the local population. However, the entrance to the trails of Tortuguero Hill is located in the village. Tortuguero Hill is one of the main untapped tourist attractions in the area, and its opening to tourism may lead to significant commercial growth in the community.

**Village of Barra de Parismina:** It is a town located on the southern border of Tortuguero National Park, belonging to the canton of Siquirres. It is connected to the park by water, either along the river or by the coast. The Asociación Salvemos las Tortugas de Parismina (ASTOP) coordinates the area’s tourism and its relationship to the park, recruiting volunteers from Costa Rica and abroad. There are also small hotels and cabins dedicated to adventure fishing and ecotourism.

The second entrance post to the park (Puesto Jalova) is found near Barra de Parismina. This entrance receives less visitors than the Cuatro Esquinas sector despite having several similar attractions.

Villages of Linda Vista and Zota 1. Both are located on Route 247, 12 kilometers from the Palmitas Service Station, on the road to Barra del Colorado. Rural tourism in the community includes visits to lagoons, hiking and gastronomy with local products. In addition to offering tours to the Kawe and La Garza lagoons, two water mirrors that are perfect for spotting aquatic birds, the villages are ideally located for hiking up Cerro Coronel, one of the highest points of the northern Caribbean.

**Barra del Colorado:** Located 35 km north of Barra del Tortuguero in the extreme north of Costa Rica, near the border with Nicaragua, the region offers natural landscapes and outdoor adventure activities. Its landscape of tropical forests, marshlands and river islands has become the ideal destination for sport fishers looking to catch tarpon. The Río Colorado is the perfect sport fishing destination for a wide variety of species. In addition to sport fishing, Barra del Colorado has been developing with other activities such as canoe tours to inland lagoons, birdwatching, and enjoying the region’s cuisine, which heavily features fresh seafood.

**Sea Turtles**

This area is a site of biological importance for the nesting of sea turtles, such as leatherbacks (Dermochelys coriacea), green sea turtles (Chelonia mydas) and hawksbills (Eretmochelys imbricata). It is also home to manatees, caimans, tarpons, migratory birds, wild pigs, tepezcuintles, tapirs, palm species such as the yolillo and beach species such as the uva de playa, icaco or sangrillo and other species typical of the wetlands.

**Fishing**

In this region, the lower channel of the Río Reventazón joins the Río Parismina. The river is famed for its rich fish populations, especially in the areas near its mouth. Several fishing lodges offer everything you need for a sport fishing trip in the area, which is located just to the south of Tortuguero National Park. The Caño Blanco pier is therefore the point of origin of many trips to this national park.
How do you get there?

The main access to Tortuguero is by boat through the rivers and lagoons. The main option is to arrive at the La Pavona pier, where boats leave for Tortuguero National Park, by private or public transportation or taxi.

Another option is to take the boat to Tortuguero from Moín. The trip by boat does cost a little more, since the trip is offered as a tour in itself, showing passengers some of the natural wonders of the area from the moment they board before taking them to their hotel in the park. The trip from Moín can take about half a day, making stops to see animals, birds and the beautiful scenery of Tortuguero National Park and nearby reserves such as Pacuare and Parismina.

Getting to Tortuguero via Moín

This route is used by some travelers from Puerto Viejo. First, travel to Limón and from there take a taxi to Moín, a port town next to Limón. The boats that leave from here are private charters and are not very frequent; they may also have been fully booked in advance. This route has the longest stretch on the water.

1. From San José to Cariari:

   From San José, take highway 32 to Limón, which leads to Guápiles. Once in Guápiles, continue on highway 32 until you reach the Santa Clara gas station. Turn left. After traveling north for 8.1 km, turn left at the crossroads. Follow the railroad tracks for about 0.7 km and turn right at the main road. After 10.4 km, you will arrive at Cariari.

2. From Cariari to La Pavona:

   Follow the road through Cariari for 7.1 km. At the crossroads, turn right towards Campo Dos. Keep going on the road, following the signs for Campo Dos and Cuatro Esquinas. Follow the road until you reach Cuatro Esquinas. After 8.9 km, you will arrive at the town of Palacios. After the Tienda Abastecedor Palacio (on the right) turn left. There are also signs for Tortuguero. Follow the road for 5.7 km until you see a building with an old parking lot. There, turn left and follow the road until you reach La Pavona. La Pavona offers parking for $10 per day with 24-hour security, where you can leave your car safely.

3. From La Pavona to Tortuguero (by boat):

   In La Pavona there is a parking lot that is guarded at night. There is also a restaurant on the pier.

   Visitors can also fly to Tortuguero from San José. The trip is more expensive, but much faster and more comfortable. There are two airlines that operate this route: Sansa and Aerobell.

   There are three airports in the area that can receive local flights: one in Barra del Colorado, another in Barra de Parismina and one in Barra de Tortuguero. The latter is the main destination for commercial flights.

   **Automobile**

   Important to know before starting the trip by car:

   To get to the last boat to Tortuguero, you should be at La Pavona around 4:00 pm. If you arrive later, you will have to spend the night in Cariari and resume your trip the next day.

   There is no accommodation in La Pavona.

   In La Pavona there is no accommodation.

Tortuga Lodge
Hiking in Costa Rica is simply a fantastic way to experience the treasures this country has to offer. You will be able to explore different habitats while walking in the forest, immerse yourself in lush vegetation, observe the lively nature around you and encounter diverse wildlife.

Start your day with adrenaline as you fly through the woods of Limón, safely suspended and traveling between platforms. Observe the scenic beauty of the forests as you pass through the treetops, while taking in the incredible variety of biodiversity in the area. Many courses provide additional options like the Tarzan Swing and Superman, an experience that is not to be missed.

Costa Rica is not only known for its rainforest, wildlife, volcanoes and beautiful beaches. Tortuguero is a well-known sport fishing destination, the activity must be carried out in certain places because the park is a protected area. You will be able to enjoy a unique experience accompanied by a guide with plenty of knowledge about fishing.

Enjoy a kayaking adventure in the wonderful Tortuguero National Park, connecting with nature and admiring the impressive biodiversity that will surround you. It is an excellent opportunity to explore the area in a different way while also getting plenty of exercise.

Treat yourself and revitalize your senses with a day at the spa. Receive treatments including facials, exfoliation, wraps with products suited to your skin's needs (chocolate, coffee, grape, mud, algae), tension-relieving massages, deep tissue therapeutic massages, or manicures and pedicures.

Tours in Guácimo

With its spectacular ecosystems, including a tropical rainforest, Guácimo is the perfect setting to enjoy different ecotourism experiences in the Caribbean region of Costa Rica. It is an area of abundant fauna and flora, with an incredible wealth of birdwatching options. Visitors also have options related to cultural heritage and rural tourism lodges.

Known as a “factory of water” because of its wealth of rivers, the region also has abundant populations of reptiles and especially amphibians, along with mammals such as the anteater, sloth, jaguar, puma, tapir, agouti, deer, etc.

The ecotourism experience, always with the indispensable assistance of local guides, complements the numerous adventure activities, like horseback riding, ATVs, hiking, mountaineering, waterfalls, boat rides and sport fishing in the Río Parísmina, viewpoints and hanging bridges. Other options include thematic tours (cocoa, coffee, yogurt, medicinal soaps, cheese), visiting a botanical garden, agricultural tours (turmeric, pepper, among other crops). You will also experience ornamental horticulture, floriculture, fruit growing, agriculture and poultry farming.

In the Guácimo area, we have different tourism projects where you can learn about educational, gastronomic and scientific topics. There are also lodging services in the mountains (camping area, lodge, cabins), tour operators and local transportation.

Information:
- www.guacimo.go.cr/turismo/
- Mapa de Guácimo

El Jardín Tropical
Take a tour of the tropical flower plantations and be amazed by the variety of colors and shapes, as well as learning about the processes carried out in the packing house to show the packaging process. This experience is a perfect opportunity to learn about the flora of the area and buy flowers.

Caribbean Botanical Garden
Walk through this one-of-a-kind garden, dedicated mainly to orchids. Learn about innovative technology-based orchid production in the Caribbean. During the tour, you will be able to observe several representatives of the region’s fauna and flora.

Traditional House
Enjoy a traditional Costa Rican experience, seeing the day-to-day life of the communities of Limón while visiting a traditional house and learning about the region’s customs and cuisine.

Green House
Glide through the rainforest treetops in a sky gondola in search of monkeys, sloths and colorful rainforest birds. Next, visit the frog, reptile and butterfly habitats. You can also walk through the various forest trails and admire the sights and sounds of nature, as well as a beautiful waterfall. Finally, you can visit The Foundation for Rainforest Research, where university researchers discover the mysteries of nature and learn about new and exciting species.

Birdwatching
While enjoying the cool and refreshing air of the mountains of Limón, you will be able to observe an incredible variety of birds, since Central America is an important stop on the migration routes of many bird species. Enjoy this opportunity to take spectacular photos and learn about the typical species of the area.

Traditional House
Inventario turístico de Guácimo:
- google.com/maps/
Discover the beauty of the Costa Rican forests on our suspension bridge. This is a guided experience on breathtaking natural trails through the dense forests of Guácimo. This hike offers tourists a one-on-one experience with the flora and fauna of the area. You can admire natural beauty from the ground on our nature trails or discover unique life systems from the forest canopy.

For the more adventurous, you can spend the day on foot exploring the different trails and connecting with the sounds of nature made by the incredible array of animals found in the area. In addition, you will be able to observe the flora of the area and see the unique biodiversity of Limón up close.

Get in touch with your inner cowboy when you see Limón mounted on a well-cared-for and highly trained horse. During the tour, your guide will tell you about the local wildlife and nature; you may also have the opportunity to see various species of iguanas, birds, butterflies, monkeys and more.

To observe these splendid 20-meter high waterfalls, our visitors must travel through the forest on trails with comfortable rest and hydration areas through a forest of native trees. Once in front of the waterfall, you will find a large and comfortable viewpoint, from which you can preserve your memories by taking unique photographs and take a refreshing swim in the crystal-clear waters of Los Montes waterfalls!

Connect with nature in a different way, giving a little bit back for all the things it gives us. You will be able to plant a tree, which will contribute to cleaner air for everyone in the future. A unique experience that will allow you to be part of the change.
This experience will allow you to learn about cocoa how it’s prepared, as well as getting acquainted with the communities of Limón and their customs. On this tour, a group of local women will teach you how to prepare organic chocolate and turn it into handmade chocolate bars.

Chocolate Farm

At Figue’s Farm we have a restaurant service where we offer breakfast, lunch and refreshments in a rustic, family-run atmosphere. We strive to provide excellent service and comply with all protocols.

Ornamental Horticulture Courses

We offer courses in ornamental horticulture topics such as bonsai, orchids and other horticulture-related aspects.

Wellness

Enjoy a day at the spa, with treatments such as facials, seaweed wraps, tension-relieving massages, therapeutic massages, facial treatments and manicures and pedicures. You can also enjoy the benefits of hydrotherapy along with the positive effects of aromatherapy.

Japanese Garden

Enjoy the peace and tranquility of a Japanese garden.
If you are a beginner or experienced birdwatcher, or just a nature lover, this experience is for you. While enjoying the cool and refreshing air of the mountains of Limón, you will be able to observe an incredible variety of birds, since Central America is an important stop on the migration routes of many bird species.

The Cabécar community is the largest ethnic group in Costa Rica, with strong traditions and culture, and is very welcoming to visitors to their land. You will be able to walk through the indigenous reserve and experience their culture, see the carefully constructed traditional huts, visit the local school, learn about the tradition and techniques of the forest and so on.

See the small town of Bajo del Tigre. First, in order to reach this place, you will travel in a gondola suspended from a steel cable. Next, explore the river basin and rainforest on foot until you reach Bajo del Tigre, a small farming community that produces spices, roots, tubers and more. Learn about their customs, traditions and lifestyle.

</table>
Dear tourist

- Although the majority of beaches are suitable for swimming, there are some that because of their ocean conditions, shifting sands, and geomorphology are susceptible to underwater currents, also known as rip tides.
- The following is to provide some useful advice to identify them, as well as freeing yourself in the event you get caught in one, and also some general advice to enjoy the beach safely.

How can you identify a riptide?

- A channel of turbulent water moving out to sea.
- An area that has a visibly unusual color, usually due to swirling sediment from the beach.
- A formation of foam, algae, or litter moving uniformly out to sea.
- A disturbance in the wave line coming to shore.
- Remember that in many cases, these types of currents are unperceivable to the naked eye and although the ocean may seem calm, they still may be present, especially in beaches where the sediment is thick or the sand is white.

How to avoid being trapped by a rip tide?

- Be very cautious. Ocean conditions can change at any moment.
- Remember that rivers and lakes also have currents that may be dangerous.
- Never swim alone.
- Swim near lifeguards. If there are none, look for signage warning of dangerous currents, or ask some of the locals if the beach is dangerous or not.

What can I do if a riptide gets a hold of me?

- Try to stay calm to conserve energy.
- Don’t fight the current.
- Swim perpendicular to the current or parallel to the beach.
- Once you feel that you are free of the current, swim to shore.
- If unable to do the aforementioned, wade in the water. The force of the current lessens as it goes out to sea. When the current diminishes, swim toward the shore.
- If, at any moment you feel that you cannot reach the shore, get someone’s attention: face the beach, wave your arms and shout for help.

How to avoid being trapped by a rip tide?

- Be very cautious. Ocean conditions can change at any moment.
General recommendations for all beaches

- If you can't swim, be careful in the water.
- If you have eaten or drunk any alcoholic beverages, wait at least two hours before going into the water.
- Ask hotel staff, lifeguards, or locals, about the ocean water conditions.
- Look for signage or flags that warn of dangerous ocean water conditions. When you do find flags, red means danger.
- Always be in the presence of another adult who can adequately help you in the event you are in danger or need help.
- If you haven't been trained in first aid, are not skilled at swimming, or overall not in good physical condition, never try to rescue someone on your own who is drowning.
- If you haven't been trained in first aid, are not skilled at swimming, or overall not in good physical condition, never try to rescue someone on your own who is drowning.
- If you are traveling with children, senior citizens, or persons with disabilities, do not let them out of your sight.
- If a storm or other inclement weather is approaching, leave the beach area and find a safe place.

How can you help someone being dragged by a rip tide?

- Get help from a lifeguard.
- If there is no lifeguard, call 911.
- Throw the victim something that floats, like a cooler, a life jacket, or a ball.
- Yell the instructions on how to escape, as outlined in this manual.

If you're traveling in a rental car

- In the event of any damage, flat tire, or impact to the vehicle, do not accept help from strangers, since it could be a scheme to rob you. Call the agency that rented you the vehicle and do not stop until you reach a safe place.
- Never leave valuable objects in a visible place inside the car and close the doors and windows securely.

If you're going to the beach:

- If you don't know how to swim, be careful.
- Do not consume alcoholic beverages before going into the ocean and wait at least two hours after eating.
- Never swim alone. Swim close to a lifeguard post.
- Inquire about beach conditions before entering the water.
- Look for signs or warning flags.
- If you feel trapped in a rip current, do not panic and make signs that you need help.
- If you are traveling with children, senior citizens, or persons with disabilities, do not let them out of your sight.
- If a storm or other inclement weather is approaching, leave the beach area and find a safe place.
- Do not lose sight of your belongings.

For more safety tips, please visit visitcostarica.com.

You can find more safety brochures on the Visit Costa Rica site under “Publications” at the following link visitcostarica.com/en/costa-rica.
The Tortuguero node can be visualized as consisting of two large sectors of the northeastern Caribbean with distinctive characteristics that each offer their own opportunities for wildlife observation thanks to their distinct habitats and altitudinal ranges. These are the Northern Caribbean Plains and the intermediate elevations along the slopes of Volcán Turrialba.

The most coastal region is comprised of the Tortuguero Plain, an area of lowlands with expansive continental wetlands (rivers, lakes, freshwater marshes, deltas) and small hill ranges with altitudes of up to 311 m.

The high degree of endemism of the Caribbean region of Central America, this region is home to species such as the Nicaraguan seed finch (Spizella nicaraguensis) and the black-throated wren (Thryothorus occidentalis).

The Tortuguero National Route can be visualized as a network of birding areas, parks, and reserves. It covers a diverse range of habitats from the Atlantic forest to the mangroves, and includes areas such as the Tortuguero National Park, the Barra del Colorado Wildlife Refuge, and the Isla del Caño National Wildlife Refuge.

The route is particularly rich in bird species, with at least 300 species recorded, many of which are endemic or near endemic to the region. The Tortuguero National Route is also an important area for the conservation of theloggerhead turtle (Caretta caretta), which nests in the area during the months of March and June.

Barbilla National Park
Listed as part of La Amistad Biosphere Reserve, which has been declared to be a UNESCO World Heritage Site.

A year-round birding hot spot for seeing birds from the families Parulidae, Tyrannidae, and Emberizidae, among others. It is an excellent place for birdwatchers to observe a variety of species, including the Keel-billed Toucan, the Blue-gray Tanager, and the Red-legged Honeycreeper.

Primary tropical rainforest, typical of the region, at elevations of 200-1600 meters above sea level. There is also a montane rainforest.

At least 185 species of birds migrate through this corridor.

Pangola National Park
Listed as part of the Los Quemados and Bocas del Toro Important Bird Area (IBA), which is an area of high importance for the conservation of wild aquatic resources. The park is known for its diverse birdlife, including the Common Tern and the Osprey.

The characteristic residents of the wetlands in this sector include the Black-capped Heron (Ardea melanocephala) and the Snowy Egret (Egretta thula). The wetlands are also home to a variety of other bird species, including the Rufous-collared Sparrow (Zonotrichia capensis) and the Yellow-crowned Night-Heron (Nyctanassa violacea).

The Tortuguero National Route offers a unique opportunity for birdwatchers to observe a wide range of bird species in their natural habitats. The route is an important area for the conservation of biodiversity and has been recognized as a UNESCO World Heritage Site. It is a must-see destination for birdwatchers and nature enthusiasts.
The characteristic residents of the wetlands in this sector include species from the families Aracridae, Thraupidae, Parulidae, Thraupidae, Chasquiidae, and Aracridae. The most abundant migratory birds here, meanwhile, belong to the families Apodidae, Hirundinidae, Sturnidae, and Aracridae. The node is also home to the Caribbean Plains and Marshes of Costa Rica Important Bird Area (IBA), which is an area of interest due to the high diversity of species (>400) as well as a recognized migratory corridor of high importance for at least 185 migratory species.

Due to the range of altitudes in this region, birdwatchers can spot species that are more characteristic of intermediate Caribbean elevations as well as others from the country’s highlands. These include the coppery-headed emerald (Elvira cupreiceps), a species of hummingbird that is endemic to Costa Rica. At least five species have been identified as being endemic to the Central American Caribbean, including the blue and gold tanager (Igisia azarae), black and yellow tanager (Chrysothlypis chrysomelas), streak-crowned antwren (Dysithamnus striaticeps) and the tawny chested flycatcher (Myiozetetes chrysocephalus) along with nine that are endemic to the highlands of Costa Rica and western Panama, including the black guan (Chamaepetes unicolor), green-billed barbet (Semnornis frantzii), black-faced saltator (Myadestes melops) and the golden-browed chlorophonia (Chlorophonia callophrys).

The node is also home to the Caribbean plains and marshes of Costa Rica Important Bird Area (IBA), which is an area of interest due to the high diversity of species (>400) as well as a recognized migratory corridor of high importance for at least 185 migratory species.

BIRD WATCHING IN
Costa Rica

For national and international birdwatchers, Costa Rica is one of the most important tourist destinations in the world. A country with a small territory of 51,100 km² of land area (0.03% of the world’s surface) and 589,000 km² of territorial sea, it has an avifauna with more than 900 species that surpasses all of Europe. Costa Rica is possibly the country with the most bird species and habitat types in the world in relation to the size of its territory.

The diversity of birds is divided into four ornithological provinces: Highlands, Caribbean Slope, North Pacific and South Pacific. Including Cocos Island and its territorial waters.

The country has developed the National Bird Route which is composed of 12 nodes or main birding sites, involving 7 National Parks, 1 National Wildlife Refuge, private reserves and surrounding communities, distributed practically throughout the country and differentiated into 4 Bird Zones: Tropical Dry Forest, Highlands, Caribbean Tropical Rainforest and South Pacific Tropical Rainforest. All of them with a high diversity of bird species that is complemented by the culture, rurality and local communities that are integrated into this route.

Costa Rica has:

• 3 million migratory birds of prey fly through the sky from August to November.
• 220 species are migratory and correspond to Nearctic migratory species from North America.
• 19 are globally threatened.
• One of the top 5 favorite birding countries in the world.
• 7 endemic species, 4 on the mainland, 3 on Cocos Island.
• In total, Costa Rica’s bird species constitute 9% of the world’s known species. (Stiles and Skutch, 2007, p. 13-31)
